

SARATH JAYARAM

Java Backend Developer | Spring Boot · Microservices · REST APIs · Apache Kafka · Docker

Cherpulassery, Kerala, India • 9746881553 • sarathjayaram25@gmail.com • [linkedin.com/in/sarathjayaram](https://www.linkedin.com/in/sarathjayaram) • github.com/Sarath-Jayaram

SUMMARY

Java Backend Developer with 5+ years designing and shipping scalable enterprise applications in Spring Boot, Spring Security, and microservices architecture. Cut average response time on a high-traffic search API by **nearly 70% (2.8s -> 900ms)** through query optimization and response caching. Strong foundation in RESTful API design, JWT-based security, and CI/CD delivery, with hands-on experience in Apache Kafka and Docker that I'm actively deepening through structured, project-based study. Pairs AI-assisted tools (GitHub Copilot, Gemini, ChatGPT) with solid DS&A fundamentals to ship reliable code faster.

TECHNICAL SKILLS

Languages & Frameworks: Java 17, Spring Boot, Spring Security, Hibernate

Data & Messaging: PostgreSQL, MySQL, Oracle, Apache Kafka (producers, consumers, topic-based messaging)

APIs & Architecture: RESTful APIs, Microservices Architecture, API Gateway Integration, JWT Authentication

DevOps & Cloud: Docker, Jenkins, Git, Maven, Google Cloud Platform (GCP)

Testing & Quality: JUnit, Mockito, Postman, Bruno, SonarQube

PROFESSIONAL EXPERIENCE

Developer III — UST, Ernakulam, India

Jul 2025 – Present

- Cut average response time on a high-traffic search API by nearly 70% (2.8s -> under 900ms) by eliminating redundant database queries and introducing response caching.
- Eliminated recurring code duplication across legacy business modules by refactoring with SOLID principles and targeted design patterns, easing future feature delivery.
- Improved application stability and cut recurring production incidents by resolving critical issues through systematic log analysis, debugging, and root-cause analysis.
- Closed authentication and authorization gaps across REST endpoints by implementing JWT-based authentication, role-based access control, and custom Spring Security filters.
- Simplified client-service communication by integrating backend microservices with an API Gateway for centralized authentication, request routing, and rate limiting.
- Introduced event-driven communication between microservices using Apache Kafka producers and consumers, and containerized backend services with Docker for consistent local development and testing.
- Supported reliable feature releases and production deployments by coordinating with QA, DevOps, and product teams, using GCP to monitor logs and validate deployments.
- Accelerated development and debugging turnaround on routine tasks by integrating AI-assisted tools (GitHub Copilot, Gemini, ChatGPT) into daily workflow.

Systems Engineer — Tata Consultancy Services, Ernakulam, India

Aug 2021 – Jul 2025

- Delivered scalable, high-performance enterprise backend systems by designing and maintaining applications in Java, Spring Boot, and microservices architecture.
- Improved code readability and maintainability by modernizing existing modules with Java 8 features — Streams, Lambdas, Functional Interfaces, Optional, and method references.
- Enabled loosely coupled, independently deployable services by architecting microservices solutions with REST API communication and Kafka-based asynchronous messaging.
- Closed security gaps across REST endpoints by implementing JWT-based authentication, CSRF protection, and custom authentication filters.
- Reduced issue resolution time across dev and production environments by debugging with IDE tools, Postman, and Spring Actuator endpoints.
- Safeguarded application reliability by writing and executing unit and integration tests with JUnit, Mockito, and Postman.
- Kept releases on schedule by maintaining CI/CD pipelines (Jenkins, Git, Maven) and delivering features within Agile/Scrum teams.

EDUCATION

B.Tech in Computer Science and Engineering — SCMS School of Engineering and Technology

2017 – 2021

TRAINING & CERTIFICATIONS

- Token Intelligence & Context Engineering
- GitHub Copilot — Intermediate to Advanced
